Marine Biodiversity, Climatic Variability and Global Change (Earthscan Oceans)

Grégory Beaugrand

Marine Biodiversity, Climatic Variability and Global Change (Earthscan Oceans) Grégory Beaugrand

Biodiversity loss in terrestrial environments associated with human activities has been appreciated as a major issue for some years now. What is less well documented is the effect of such activities, including climate change, on marine biodiversity. This pioneering book is the first to address this important but neglected topic, which is likely to be the key challenge for marine scientists in the near future.

Using a multidisciplinary and a holistic approach, the book reveals how climatic variability controls biodiversity at time scales ranging from synoptic meteorological events to millions of years and at spatial scales ranging from local sites to the whole ocean. It shows how global change, including anthropogenic climate change, ocean acidification and more direct human influences such as exploitation, pollution and eutrophication may alter biodiversity, ecosystem functioning and regulating and provisioning services. The author proposes a theory termed the 'macroecological theory on the arrangement of life', which explains how biodiversity is organized and how it responds to climatic variability and anthropogenic climate change.

The book concludes with recommendations for further research and theoretical development to identify oceanic areas in need of observation and gaps in current scientific knowledge. Many references and comparisons with the terrestrial realm are included in all chapters to better understand the universality of the relationships between biodiversity, climate and the environment. The book will serve as a textbook for all students and researchers of marine science and environmental change, but will also be accessible to the more general reader.

From reader reviews:

Esther Ponce:

Why don't make it to be your habit? Right now, try to prepare your time to do the important action, like looking for your favorite e-book and reading a guide. Beside you can solve your problem; you can add your knowledge by the guide entitled Marine Biodiversity, Climatic Variability and Global Change (Earthscan Oceans). Try to make the book Marine Biodiversity, Climatic Variability and Global Change (Earthscan Oceans) as your friend. It means that it can for being your friend when you feel alone and beside those of course make you smarter than before. Yeah, it is very fortunated for yourself. The book makes you far more confidence because you can know every thing by the book. So , let's make new experience in addition to knowledge with this book.

Milton Hill:

Here thing why that Marine Biodiversity, Climatic Variability and Global Change (Earthscan Oceans) are different and dependable to be yours. First of all reading a book is good nonetheless it depends in the content than it which is the content is as delightful as food or not. Marine Biodiversity, Climatic Variability and Global Change (Earthscan Oceans) giving you information deeper and different ways, you can find any guide out there but there is no book that similar with Marine Biodiversity, Climatic Variability and Global Change (Earthscan Oceans). It gives you thrill reading through journey, its open up your personal eyes about the thing that happened in the world which is perhaps can be happened around you. It is easy to bring everywhere like in park your car, café, or even in your approach home by train. For anyone who is having difficulties in bringing the paper book maybe the form of Marine Biodiversity, Climatic Variability and Global Change (Earthscan Oceans) in e-book can be your substitute.

Paula Salas:

In this era globalization it is important to someone to find information. The information will make a professional understand the condition of the world. The healthiness of the world makes the information much easier to share. You can find a lot of personal references to get information example: internet, newspapers, book, and soon. You will see that now, a lot of publisher in which print many kinds of book. The particular book that recommended to you is Marine Biodiversity, Climatic Variability and Global Change (Earthscan Oceans) this book consist a lot of the information on the condition of this world now. That book was represented how does the world has grown up. The language styles that writer value to explain it is easy to understand. Typically the writer made some study when he makes this book. This is why this book suitable all of you.

Fannie Vincent:

As a pupil exactly feel bored for you to reading. If their teacher requested them to go to the library as well as to make summary for some publication, they are complained. Just minor students that has reading's soul or

real their hobby. They just do what the professor want, like asked to the library. They go to presently there but nothing reading significantly. Any students feel that examining is not important, boring in addition to can't see colorful pics on there. Yeah, it is to be complicated. Book is very important to suit your needs. As we know that on this time, many ways to get whatever you want. Likewise word says, ways to reach Chinese's country. Therefore , this Marine Biodiversity, Climatic Variability and Global Change (Earthscan Oceans) can make you sense more interested to read.
