Using an outline format for rapid comprehension, this concise text is as easy to understand by those collecting evidence as it is by those in the branches of criminal justice who need to understand the principles. Divided into two parts, the book begins with the basics of analysis, providing a brief history, systematic methods of identification, fingerprint pattern types and their associated terminologies, and current classifications.

The second section covers the identification and presentation of evidence in the courtroom, demonstrating both the traditional, manual method of lifting prints and the newer techniques for automated and live scans. The book provides instruction on searching and developing latent prints, storage, and comparison of prints.

Author Mark R. Hawthorne is the lead instructor in physical evidence and crime scenes at the San Francisco Police Regional Training Academy. He brings his twenty-nine years experience in police work processing over 3000 crime scenes to present a practical, concise guide to a complex science, helping readers to understand the principles, applications, and uses of fingerprints, whether at the scene, or in the courtroom.
