Emily Riehl

Categorical Homotopy Theory (New Mathematical Monographs) Emily Riehl

This book develops abstract homotopy theory from the categorical perspective with a particular focus on examples. Part I discusses two competing perspectives by which one typically first encounters homotopy (co)limits: either as derived functors definable when the appropriate diagram categories admit a compatible model structure, or through particular formulae that give the right notion in certain examples. Emily Riehl unifies these seemingly rival perspectives and demonstrates that model structures on diagram categories are irrelevant. Homotopy (co)limits are explained to be a special case of weighted (co)limits, a foundational topic in enriched category theory. In Part II, Riehl further examines this topic, separating categorical arguments from homotopical ones. Part III treats the most ubiquitous axiomatic framework for homotopy theory - Quillen's model categories. Here, Riehl simplifies familiar model categorical lemmas and definitions by focusing on weak factorization systems. Part IV introduces quasi-categories and homotopy coherence.

From reader reviews:

Ruth Michel:

Book is actually written, printed, or outlined for everything. You can know everything you want by a reserve. Book has a different type. To be sure that book is important matter to bring us around the world. Next to that you can your reading expertise was fluently. A e-book Categorical Homotopy Theory (New Mathematical Monographs) will make you to end up being smarter. You can feel far more confidence if you can know about every thing. But some of you think in which open or reading a new book make you bored. It is not make you fun. Why they can be thought like that? Have you looking for best book or appropriate book with you?

Steven Anderson:

Typically the book Categorical Homotopy Theory (New Mathematical Monographs) has a lot info on it. So when you check out this book you can get a lot of profit. The book was written by the very famous author. The author makes some research previous to write this book. This book very easy to read you will get the point easily after looking over this book.

Stacey Pinkston:

Do you really one of the book lovers? If yes, do you ever feeling doubt when you find yourself in the book store? Aim to pick one book that you just dont know the inside because don't assess book by its cover may doesn't work this is difficult job because you are afraid that the inside maybe not while fantastic as in the outside look likes. Maybe you answer can be Categorical Homotopy Theory (New Mathematical Monographs) why because the amazing cover that make you consider regarding the content will not disappoint an individual. The inside or content is definitely fantastic as the outside as well as cover. Your reading 6th sense will directly direct you to pick up this book.

Rosa Milliken:

Are you kind of active person, only have 10 or even 15 minute in your morning to upgrading your mind ability or thinking skill actually analytical thinking? Then you are receiving problem with the book compared to can satisfy your limited time to read it because this time you only find book that need more time to be study. Categorical Homotopy Theory (New Mathematical Monographs) can be your answer since it can be read by a person who have those short time problems.
