Graph Theoretic Methods in Multiagent Networks (Princeton Series in Applied Mathematics) Mehran Mesbahi, Magnus Egerstedt

This accessible book provides an introduction to the analysis and design of dynamic multiagent networks. Such networks are of great interest in a wide range of areas in science and engineering, including: mobile sensor networks, distributed robotics such as formation flying and swarming, quantum networks, networked economics, biological synchronization, and social networks. Focusing on graph theoretic methods for the analysis and synthesis of dynamic multiagent networks, the book presents a powerful new formalism and set of tools for networked systems.

The book's three sections look at foundations, multiagent networks, and networks as systems. The authors give an overview of important ideas from graph theory, followed by a detailed account of the agreement protocol and its various extensions, including the behavior of the protocol over undirected, directed, switching, and random networks. They cover topics such as formation control, coverage, distributed estimation, social networks, and games over networks. And they explore intriguing aspects of viewing networks as systems, by making these networks amenable to control-theoretic analysis and automatic synthesis, by monitoring their dynamic evolution, and by examining higher-order interaction models in terms of simplicial complexes and their applications.

The book will interest graduate students working in systems and control, as well as in computer science and robotics. It will be a standard reference for researchers seeking a self-contained account of system-theoretic aspects of multiagent networks and their wide-ranging applications.

This book has been adopted as a textbook at the following universities:

- University of Stuttgart, Germany
- Royal Institute of Technology, Sweden
- Johannes Kepler University, Austria
- Georgia Tech, USA
- University of Washington, USA
- Ohio University, USA

From reader reviews:

Sandy Holiday:

Why don't make it to become your habit? Right now, try to ready your time to do the important action, like looking for your favorite book and reading a guide. Beside you can solve your short lived problem; you can add your knowledge by the publication entitled Graph Theoretic Methods in Multiagent Networks (Princeton Series in Applied Mathematics). Try to make book Graph Theoretic Methods in Multiagent Networks (Princeton Series in Applied Mathematics) as your friend. It means that it can for being your friend when you experience alone and beside that course make you smarter than ever. Yeah, it is very fortunated for yourself. The book makes you far more confidence because you can know everything by the book. So , let us make new experience in addition to knowledge with this book.

Brenda Rodriguez:

Do you one among people who can't read pleasant if the sentence chained from the straightway, hold on guys this particular aren't like that. This Graph Theoretic Methods in Multiagent Networks (Princeton Series in Applied Mathematics) book is readable simply by you who hate the straight word style. You will find the facts here are arrange for enjoyable reading experience without leaving perhaps decrease the knowledge that want to deliver to you. The writer involving Graph Theoretic Methods in Multiagent Networks (Princeton Series in Applied Mathematics) content conveys objective easily to understand by lots of people. The printed and e-book are not different in the content material but it just different as it. So , do you nevertheless thinking Graph Theoretic Methods in Multiagent Networks (Princeton Series in Applied Mathematics) is not loveable to be your top checklist reading book?

Ronda Tollison:

Reading a publication tends to be new life style on this era globalization. With reading you can get a lot of information that could give you benefit in your life. Along with book everyone in this world can share their idea. Textbooks can also inspire a lot of people. Lots of author can inspire their own reader with their story or maybe their experience. Not only the story that share in the publications. But also they write about the data about something that you need example of this. How to get the good score toefl, or how to teach children, there are many kinds of book that exist now. The authors in this world always try to improve their skill in writing, they also doing some study before they write to the book. One of them is this Graph Theoretic Methods in Multiagent Networks (Princeton Series in Applied Mathematics).

Edward Trotta:

That guide can make you to feel relax. This kind of book Graph Theoretic Methods in Multiagent Networks (Princeton Series in Applied Mathematics) was vibrant and of course has pictures around. As we know that book Graph Theoretic Methods in Multiagent Networks (Princeton Series in Applied Mathematics) has many kinds or style. Start from kids until teenagers. For example Naruto or Investigation company Conan you can

read and feel that you are the character on there. So , not at all of book are usually make you bored, any it makes you feel happy, fun and relax. Try to choose the best book for you personally and try to like reading which.
