Generational Feminism: New Materialist Introduction to a Generative Approach Iris van der Tuin

Iris van der Tuin redirects the notion of generational logic in feminism away from its simplistic conception as conflict. Generational logic is said to problematize feminist theory and gender research as it follows a logic of divide and conquer between the old and the young and participates in patriarchal structures and phallogocentrism. Examining the continental philosophies of Bergson and Deleuze and French feminisms of sexual difference, van der Tuin paves the way for a more complex notion of generationality. This new conception of the term views generational cohorts as static measurements that happen in the flow of being. Prioritizing this generative flow gives what is measured its proper place as an effect.

Generational Feminism: New Materialist Introduction to a Generative Approach experiments with a previously disregarded methodology's implications as an impetus for a new materialism and advances feminist politics for the twenty-first century.
