Photonic Crystals: Molding the Flow of Light

John D. Joannopoulos, Robert D. Meade, Steven G. Johnson, Joshua N.

Photonic Crystals: Molding the Flow of Light John D. Joannopoulos, Robert D. Meade, Steven G. Johnson, Joshua N.

Since it was first published in 1995, *Photonic Crystals* has remained the definitive text for both undergraduates and researchers on photonic band-gap materials and their use in controlling the propagation of light. This newly expanded and revised edition covers the latest developments in the field, providing the most up-to-date, concise, and comprehensive book available on these novel materials and their applications.

Starting from Maxwell's equations and Fourier analysis, the authors develop the theoretical tools of photonics using principles of linear algebra and symmetry, emphasizing analogies with traditional solid-state physics and quantum theory. They then investigate the unique phenomena that take place within photonic crystals at defect sites and surfaces, from one to three dimensions. This new edition includes entirely new chapters describing important hybrid structures that use band gaps or periodicity only in some directions: periodic waveguides, photonic-crystal slabs, and photonic-crystal fibers. The authors demonstrate how the capabilities of photonic crystals to localize light can be put to work in devices such as filters and splitters. A new appendix provides an overview of computational methods for electromagnetism. Existing chapters have been considerably updated and expanded to include many new three-dimensional photonic crystals, an extensive tutorial on device design using temporal coupled-mode theory, discussions of diffraction and refraction at crystal interfaces, and more. Richly illustrated and accessibly written, *Photonic Crystals* is an indispensable resource for students and researchers.

- Extensively revised and expanded
- Features improved graphics throughout
- Includes new chapters on photonic-crystal fibers and combined index-and band-gap-guiding
- Provides an introduction to coupled-mode theory as a powerful tool for device design
- Covers many new topics, including omnidirectional reflection, anomalous refraction and diffraction, computational photonics, and much more.

From reader reviews:

Jewell Garza:

This Photonic Crystals: Molding the Flow of Light book is not ordinary book, you have after that it the world is in your hands. The benefit you receive by reading this book is actually information inside this e-book incredible fresh, you will get data which is getting deeper anyone read a lot of information you will get. This kind of Photonic Crystals: Molding the Flow of Light without we know teach the one who examining it become critical in contemplating and analyzing. Don't possibly be worry Photonic Crystals: Molding the Flow of Light can bring when you are and not make your case space or bookshelves' become full because you can have it in your lovely laptop even cellphone. This Photonic Crystals: Molding the Flow of Light having excellent arrangement in word as well as layout, so you will not feel uninterested in reading.

Dixie Love:

Many people spending their period by playing outside using friends, fun activity having family or just watching TV the whole day. You can have new activity to spend your whole day by studying a book. Ugh, you think reading a book can actually hard because you have to take the book everywhere? It alright you can have the e-book, taking everywhere you want in your Smart phone. Like Photonic Crystals: Molding the Flow of Light which is getting the e-book version. So , try out this book? Let's notice.

Michael Hollinger:

As we know that book is essential thing to add our information for everything. By a guide we can know everything we would like. A book is a pair of written, printed, illustrated as well as blank sheet. Every year seemed to be exactly added. This reserve Photonic Crystals: Molding the Flow of Light was filled in relation to science. Spend your spare time to add your knowledge about your scientific disciplines competence. Some people has various feel when they reading some sort of book. If you know how big advantage of a book, you can really feel enjoy to read a e-book. In the modern era like now, many ways to get book you wanted.

Cheryl Edgerly:

Do you like reading a book? Confuse to looking for your favorite book? Or your book has been rare? Why so many problem for the book? But almost any people feel that they enjoy with regard to reading. Some people likes looking at, not only science book but additionally novel and Photonic Crystals: Molding the Flow of Light or others sources were given know-how for you. After you know how the good a book, you feel desire to read more and more. Science publication was created for teacher or maybe students especially. Those textbooks are helping them to increase their knowledge. In different case, beside science book, any other book likes Photonic Crystals: Molding the Flow of Light to make your spare time considerably more colorful. Many types of book like this one.
